What is an OpenCeiling?

An OpenCeiling consists of multiple illuminated photopanel creating a realistic photographic illusion of the sky.

The OpenCeiling fits in every suspended/tiled ceiling and can be installed in a matter of hours; no major refurbishment is necessary.

The OpenCeiling combines beautiful natural images with daylight-quality light bringing all the benefits of nature inside!

An OpenCeiling consists of three components:

1. Daylight-balanced (6500K) lightbulbs or LED panels
2. High-resolution photopanel
3. OpenFrames

The illuminated photopanel creates a virtual skylight and creates a positive atmosphere in any interior.

OpenCeilings and the Healing Environment

The natural and soothing images of the OpenCeiling contribute towards creating an Healing Environment; an environment where stress factors are reduced, hence promoting the healing process and well-being of patients.

Advantages of the OpenCeiling in Healthcare settings:

- Transforms clinical and cold interiors into natural healing environments
- Provides a positive distraction during painful medical procedures
- Creates a pleasant working environment for medical staff
- Enhances the patient's waiting experience in reception areas
- Contributes towards creating a unique and memorable interior
- Confined spaces are transformed into open and fresh environments
- Provides a welcome experience of daylight in dark interiors
